Ranking Member Mike Simpson  
Subcommittee on Energy and Water  
Development, and Related Agencies  
Committee on Appropriations  
1016 Longworth House Office Building  
Washington, D.C. 20515

Dear Chairwoman Kaptur and Ranking Member Simpson,

As you begin your work on the FY 2023 Energy and Water Appropriations bill, the undersigned organizations urge you to provide a one-time appropriation of \$31.5 million to establish the Department of Energy Foundation for Energy Security and Innovation (FESI).

FESI would fill a critical gap in successfully transitioning new energy technologies into the market and meeting the nation's energy security and climate goals. FESI is consistent with the *Partnerships for Energy Security and Innovation Act* passed by both the Senate in June 2021 as part of the U.S. Innovation and Competition Act ([S.1260](#)) and the House in February 2022 as part of the America Competes Act ([H.R. 4863](#)). The creation of FESI will be included in the final innovation package Congress is currently negotiating. The funding recommendation is also consistent with the May 2020 Information Technology and Innovation Foundation report *Mind the Gap: A Design for a New Energy Technology Commercialization Foundation*.

As a nonprofit foundation, the FESI would channel private-sector investments to help support the creation, development and commercialization of next generation energy technologies across the country. FESI would complement the Department of Energy's (DOE) new Office of Clean Energy Demonstrations and the types of clean energy projects proposed in the Energy Infrastructure Act and funded in the Infrastructure and Investments Jobs Act. This type of foundation would help capitalize on the federal government's investments in clean energy research and development by attracting private sector investment and partnership, as well as philanthropic donations. In particular, the FESI would pool resources to support innovative teams from industry, universities, national laboratories, state energy offices and incubators to commercialize new energy technologies. The FESI would leverage its connection to DOE to connect innovators with world-leading facilities, instrumentation, and experts at the 17 DOE national laboratories and DOE-funded research universities and bring to market the most promising energy technologies. A FESI would also help unlock and guide the untapped intellectual property held at DOE-funded national laboratories and research universities beyond just clean energy technologies to a broader portfolio of technologies to address national security, environmental, manufacturing, and other areas of U.S. competitiveness.

We believe that it is time for DOE to have a foundation of its own to support its mission of ensuring America's security and prosperity by addressing its energy, environmental and nuclear challenges through transformative science and technology solutions. Modeled after the successful Foundation for the National Institutes of Health (FNIH) and other congressionally-mandated agency-affiliated foundations, the FESI would complement DOE investments in cutting-edge research and help bridge the gap between innovative but unproven prototypes and successful commercialization and penetration of new technology into the market.

With a one-time, modest investment of \$31.5 million, the FESI would help accelerate innovation, strengthen the U.S. economy and bolster our global competitiveness as well as provide a new funding stream to help commercialize DOE technologies and improve relationships between the public and private sectors.

Thank you for your leadership and dedication to improving America's scientific enterprise.

Sincerely,
